Profile

Artificial Intelligence undergraduate with hands-on experience in machine learning, computer vision, RAG systems, and full-stack AI application development. Skilled in building end-to-end intelligent systems integrating deep learning, FastAPI, React, Streamlit, and explainable AI workflows. Experienced through AI-driven healthcare, telehealth and intelligent platform projects. Strong interest in applied AI engineering, healthcare AI, multimodal learning, and scalable intelligent systems.

Education

Air University – Bachelor of Science in Artificial Intelligence

(Sep 2023 – Present)

- **CGPA:** 2.96/ 4.00
- **Relevant Coursework:** Machine Learning, Deep Learning, Computer Vision, Natural Language Processing, Information Retrieval, Data Structures & Algorithms, Full Stack Web Development, Database Systems

Experience

Technical Intern — Software Productivity Strategists, Inc. (SPS) (Remote)

(Jul 2025 – Sep 2025)

- Successfully completed a structured 10-week technical internship across multiple software and development tracks.
- Demonstrated adaptability, technical learning and professional collaboration in a remote software engineering environment.
- Contributed to assigned technical tasks while strengthening practical development and workflow management skills.

Technical Skills

Programming: Python, JavaScript, C++, SQL, Assembly

AI/ML: Machine Learning, Deep Learning, Computer Vision, Natural Language Processing (NLP), Retrieval-Augmented Generation (RAG), Explainable AI (XAI), Transfer Learning, Multimodal AI Systems

Frameworks & Libraries: TensorFlow/Keras, Scikit-learn, OpenCV, LangChain, FAISS, Streamlit, FastAPI, Next.js, React, Node.js

Databases & Cloud: MySQL, MongoDB, SQLite

Web & Software Development: REST APIs, HTML5, CSS3, Tailwind CSS, Responsive Web Design

Tools and Platforms: Git, GitHub, Postman, Google Colab, VS Code, PyCharm, Figma

Projects

MediAssist – Smart Medical Assistant System

- Built a healthcare platform combining disease prediction, medical chatbot, and hospital locator functionality.
- Developed ML-based disease prediction models using Scikit-learn.
- Integrated NLP and RAG-based chatbot for contextual medical guidance.
- Implemented hospital locator using graph search algorithms and NetworkX.

Automatic Number Plate Recognition System using Computer Vision

- Real-time detection at 15–25 FPS across image, video, and webcam inputs
- Detect plates automatically and extract text from plates using OCR.
- Streamlit dashboard with detection history, charts, and CSV export

Auto Complete System using NLP

- Developed an N-Gram Language Model in Python for next-word prediction and text auto-completion using NLP techniques.
- Implemented a complete **NLP preprocessing pipeline** including tokenization, Out-of-Vocabulary (OOV) handling, and Laplace smoothing for probability estimation.

Chess Using Socket Programming in Python

- Developed a two-player networked chess game, Implemented client-server communication over LAN.
- Applied networking and synchronization concepts for multiplayer gameplay.

Certifications:

Supervised Machine Learning: Regression and Classification

(DeepLearning.AI – Coursera, Jul 2025)

Generative AI: Introduction and Application

(IBM – Coursera, Jul 2025)

Generative AI: Prompt Engineering Basics

(IBM – Coursera, Aug 2025)
